

User Configurable Sequential Transmitter

Upgraded Features

- Fires up to 144 cues in semi-automatic (single-shot sequential) and fully-automatic (machine gun) modes. Optional frequencies of 418, 315, and 433 MHz are available. Radio range is ½ mile. Custom system codes are available.
- Coverage of any of 12 digital channels can be configured by user, with 12 cues per channel. May be configured for single-channel (12 cues) or multi-channel (up to 144 cues) operation.
- Configuration is retained in non-volatile memory even when power is disconnected.
- LED indicators flash channel configuration at power-on and battery status during operation.
- Compatible with all single-shot, 6-shot, and 12-shot Holatron receivers.
