

## User Pairable 12 Channel Receivers

### Upgraded Features

- All Holatron high-speed UHF receivers now include upgraded software with no increase in price that permits the user to automatically pair them with the transmitted system code, channel, and cue range of any high-speed sequential or random-fire UHF transmitter.
- Pairing is retained in non-volatile memory even when power is disconnected.
- LED indicator displays the received system code during pairing operation.
- LED indicator displays the paired channel number at subsequent power-on and displays battery status during operation. Paired channel selection can be overridden by setting enclosed digital switch to channel 1-12.
- All existing single-shot, 6-shot, and 12-shot Holatron high-speed receivers may be upgraded for automatic pairing for \$15 each.
